Model	Item no.
QAM output module	492055 492056
Version F	Date 08/2016

Attention! / Achtung! / Consignes de sécurité!

Failure to comply with the specified precautionary measures may cause serious injury to persons or damage to property. The installation and commissioning may only be performed by suitably qualified persons, technicians or installers in compliance with safety regulations.

Damage due to improper installation and commissioning, defective connectors on cables or any other incorrect handling will void the warranty.

CAUTION: The safety requirements are according to EN 60728-11 and must be observed.

EN

- Disconnect mains power before working on electrical systems.
- Any additional electrical wiring requirements should always be installed by a suitably qualified person(s).

Installation or service work should NEVER be undertaken during electrical / thunderstorms.

Disposal

Within in the European Union this label indicates that the product cannot be disposed of with the general household waste. Neither the headend nor the input and output modules can be disposed of with the general household waste.

For proper treatment and recycling of old products, please take them to designated collection points in accordance with your national legislation.

1. Introduction

1.1 Box content

A new output module is wrapped in antistatic bubble wrap and packed in a cardboard box when you receive it. Included in the box is a user guide instructing you in how to use the TDX Service Tool to configure the module.

1.2 QAM module

The QAM output module is available in two versions, one version with Common Interface (CI) and one without. Below you can see an illustrated description of a QAM module with CI slots.

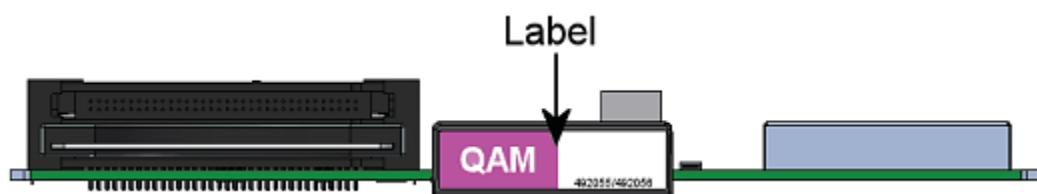

1.3 Labels

A label is placed on the output module where you can write the information regarding the configuration of the module. Besides the information that you write on the label, the module type and part number are also displayed on the label.

NOTE:

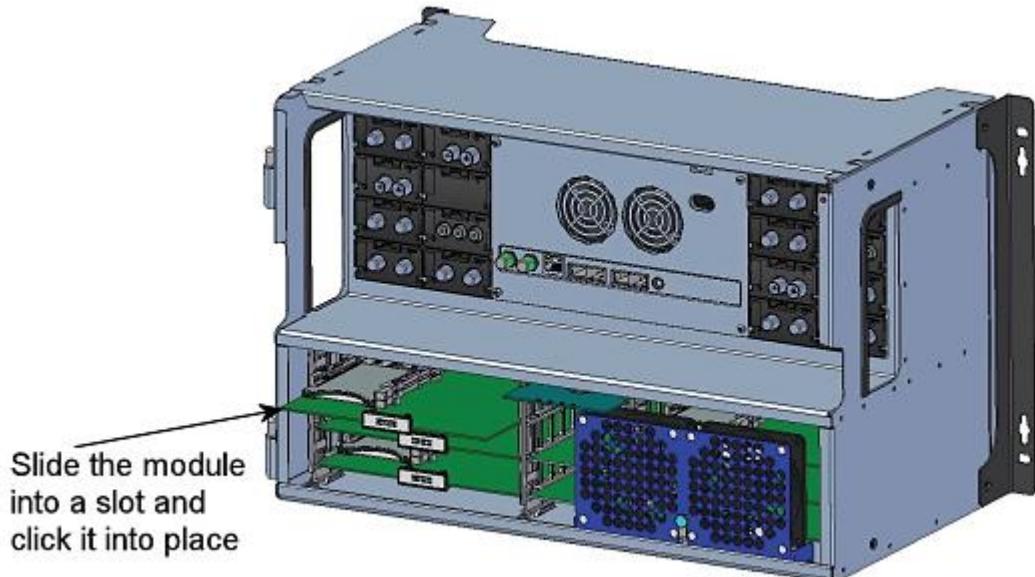

The coloured part of the label informs you of the module type. Each type of module is allocated a unique coloured label.

On the bottom of the module you will find a label with the bar code and a serial number printed on it.

1.4 Installation of module

You install an output module by sliding the module into a module slot in the lower section of the headend unit and click it into place.

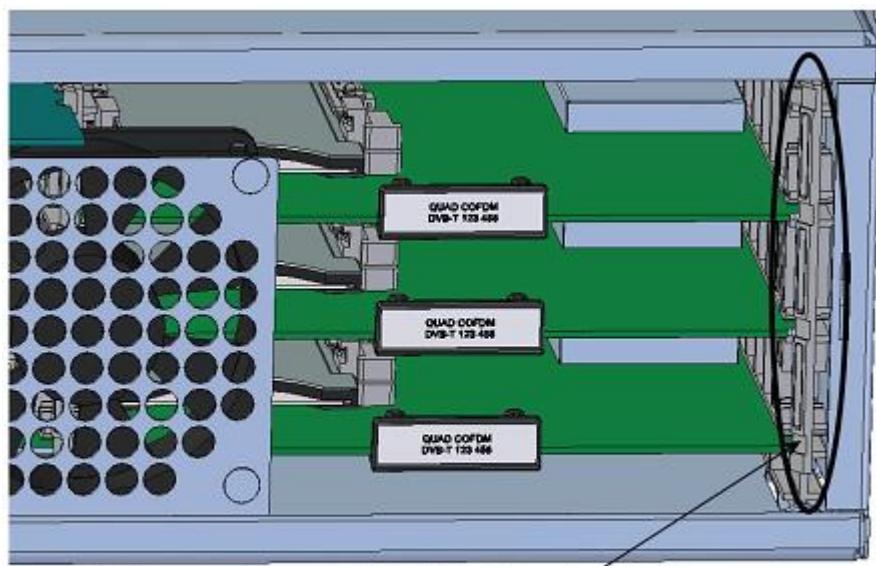

NOTE:

You can use hot swapping when you insert a module into or remove a module from the TDX system.

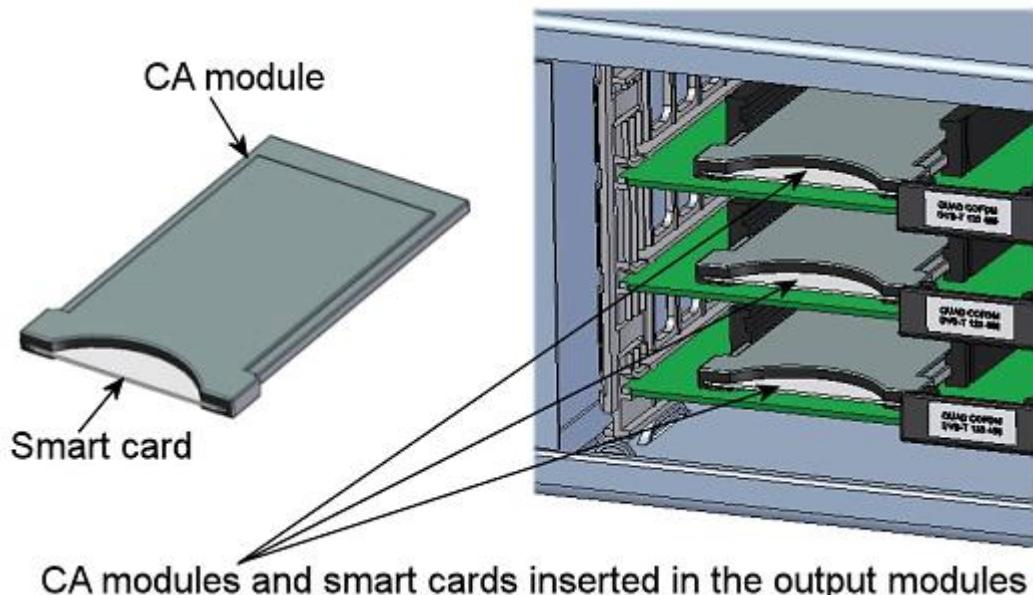

1.5 Removal of module

You release a CI module from a slot by using the lock mechanism that is placed to the right of the modules in the output section. Move the lock mechanism slightly to release the module.

1.6 CAM / Smart card

You can insert 2 Conditional Access modules (CA) into each of those output modules that have Common Interface (CI) slots. Each CA module is able to unscramble at least one service. Which services depend on the service provider of the CA module and smart card.

1.7 Status LED

There is a status LED on the front of each module. The LED indicates whether the module functions according to its purpose or fails.

Green - flashing	The output module receives data.
Green - constant on	The output module receives valid services.
Red	When starting the TDX system the output module and the system controller negotiate connection speed. If the LED continues to be red either the output module or the system controller has not been inserted correctly.
No colour	The output module has not been configured yet or the module has not been inserted correctly.

When you update the software of a module the status LED provides you with information about the updating process.

Orange	Boot loader state.
Temporary off	Initiation of the software update.
GMT Offset:	Menu is valid only when selected "User Define" in GMT Usage menu . The GMT offset range is "-11:30 ~ +12:00", increasing half hour progressively.
Temporary green	Every time the modules receives a valid data package. Repeated until the update is completed without errors.
Red	" Software update failed.

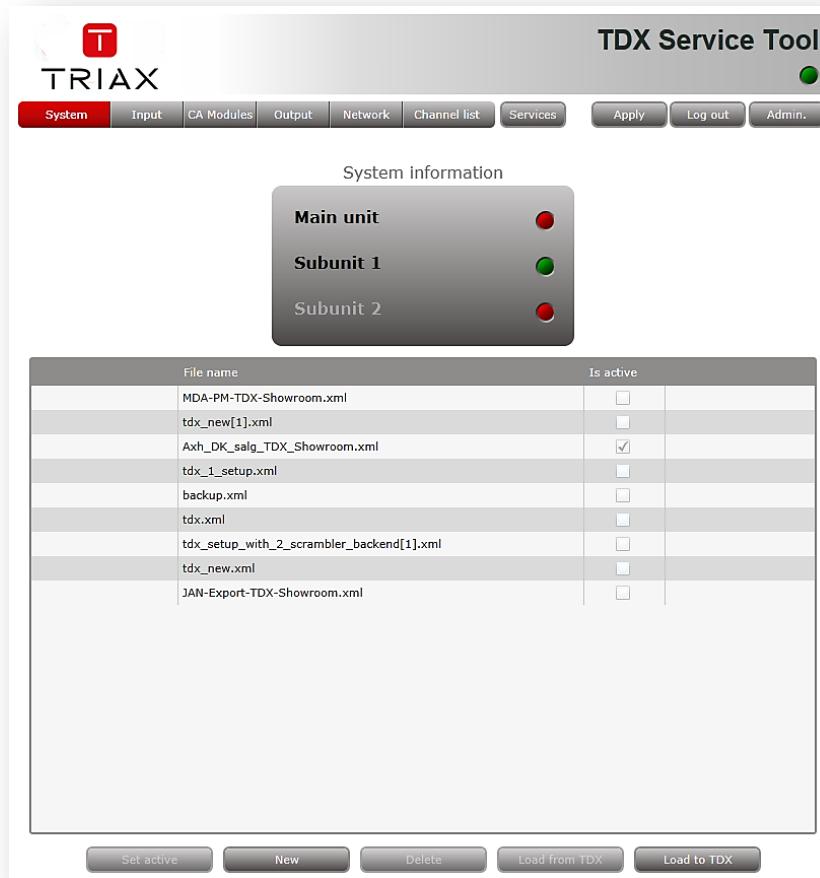

2. TDX service tool

2.1 Log in

When you have loaded the TDX Service Tool from the TDX headend system to your laptop/computer the Login window of TDX Service Tool is displayed. Default IP address/password is: 192.168.0.100 and "triax1234"

Enter Password and press "Log in" – system window is displayed

2.2 CA window

Click the CA Modules tab in the TDX Service Tool to display the CA Modules window. The first time you display the CA Modules window in a new configuration the module list only displays the number and type of the CA modules that you have inserted in the main and subunits. You have to configure the CA modules individually. To display the Configuration window, click the Setup button of the CA module you want to configure.

Slot	Card installed	Services	#PIPs	Status			
▲ Main unit (2 items)							
4-B	NDS Videoguard		0	OK	Setup ...	Delete	Log
6-A	NDS Videoguard		0	OK	Setup ...	Delete	Log

2.3 CA modules configuration window

When you open the Configuration window for a CA module in a new configuration, only default values are displayed.

Configuration

Common interface

Choose source: Pool **Change**

Card speed: 50 Mbit/s (default) **Change**

Use constant bitrate

Card function: Descramble (default) Scramble (PanAccess)

2.9 ER checkbox

If you select the ER checkbox of a service in the list area, you enable automatic error recovery for the service. By selecting the ER checkbox you enable a constant monitoring of the signal transmission status through the CA module.

The CA module is automatically reset if the signal transmission fails. When a CA module is reset, the signal transmission is interrupted for all the services associated with that CA module.

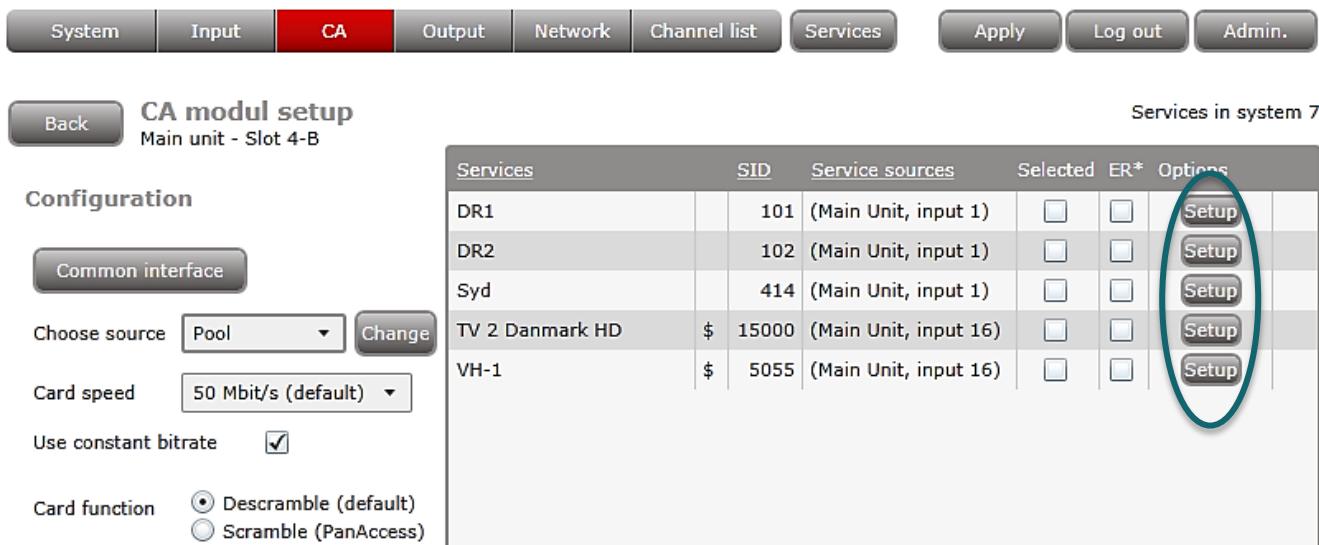

The ER checkbox should not be enabled for services where signals are not transmitted on a 24-hour basis.

Services	SID	Service sources	Selected	ER*	Options
DR1	101	(Main Unit, input 1)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
DR2	102	(Main Unit, input 1)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
Syd	414	(Main Unit, input 1)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
TV 2 Danmark HD	\$ 15000	(Main Unit, input 16)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
VH-1	\$ 5055	(Main Unit, input 16)	<input type="checkbox"/>	<input type="checkbox"/>	Setup

2.10 Filter options

To change the Filter options for a service, click the Setup button of the service in question to open the Filter options window.

Services	SID	Service sources	Selected	ER*	Options
DR1	101	(Main Unit, input 1)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
DR2	102	(Main Unit, input 1)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
Syd	414	(Main Unit, input 1)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
TV 2 Danmark HD	\$ 15000	(Main Unit, input 16)	<input type="checkbox"/>	<input type="checkbox"/>	Setup
VH-1	\$ 5055	(Main Unit, input 16)	<input type="checkbox"/>	<input type="checkbox"/>	Setup

By default all audio PIDs (Packet Identifier) associated with the service are descrambled.

To descramble all PIDs that are not audio or video related, click the Descramble non audio/video PIDs checkbox.

To descramble only selected audio PIDs you have to deselect the Descramble all audio PIDs checkbox.

Deselecting the Descramble all audio PIDs checkbox, displays a field with a drop-down list below the checkbox.

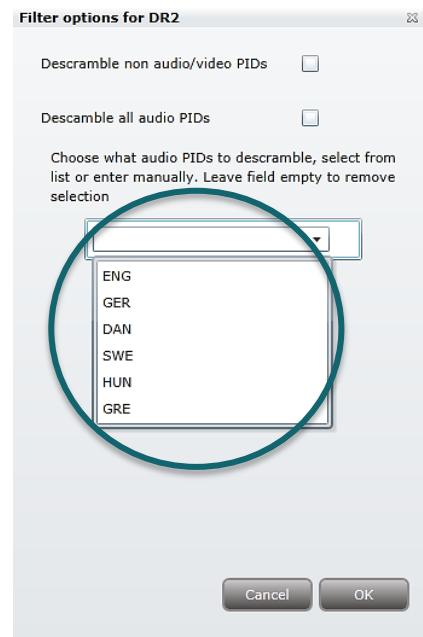

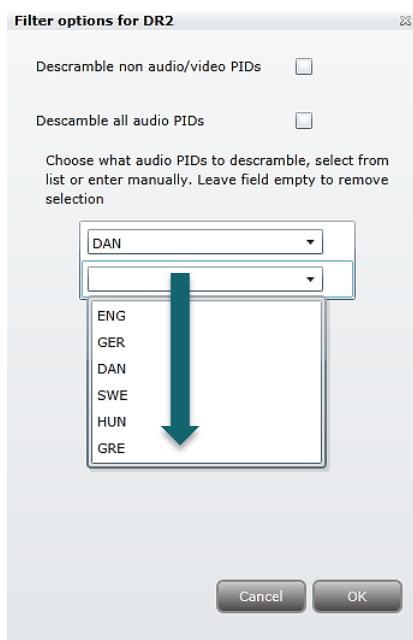

Open the drop-down list and select the language of the audio PID you want to descramble.

To descramble only selected audio PIDs you have to deselect the Descramble all audio PIDs checkbox.

An additional field with a language drop-down list is displayed every time you select a language. You can descramble as many audio PIDs as you need.

To remove a selection leave the field empty.

If the language of the audio PID you want to descramble is not displayed in the list you can enter a three letter string signifying the language you need. Click OK to return to the Configuration window.

2.11 Common interface

Clicking the Common interface button gives you access to information from the smart card inserted in the CA module. The type of information provided by the smart card depends on the card itself and its make.

Please refer to the user guides of the CA modules and smart cards you have inserted in the output modules for further information.

2.12 Reset CAM

If the CA module malfunctions, click the Reset CAM button to reboot the CA module.

A message window is displayed asking you to confirm that you want to reset the CA module.

When a CA module is reset, the signal transmission is interrupted for all the services associated with that CA module.

2.13 Submit & Apply

When you have entered the values you require you have to click the Submit button to enter this information into the headend system. Remember to click the Apply button in the upper right-hand corner to save the new settings.

2.14 Status information

To be implemented later.

2.15 Delete CA modul

If you want to remove a CA module, click the Delete button of the module in question in the CA Modules window. A message window is displayed asking you to confirm that you want to remove the output module.

2.16 Event log

System	Input	CA	Output	Network	Channel list	Services	Apply	Log out	Admin.

Fri Jan 09 06:21:12 1970:	Card removed

If you want to display a history of the events related to the CA module, click the Log button of the module in question to open the Event Log window.

3. Simulcrypt

3.1 Definitions

DVB Simulcrypt defines a system architecture that allows different Conditional Access Systems (CAS) to cooperate with head-end equipment from different vendors.

A Simulcrypt system provides CAS specific management and control, for use with a generic service scrambling mechanism in the head-ends

The basic Simulcrypt system consists of a single CAS server connected to a single head-end, e.g. a TDX single-unit or multi-unit system. Multiple head-ends may be connected to the same CAS server(s), distinguished by the IP addresses of the head-ends. This makes no difference to the scenario seen from the head-end.

3.2 Architecture

The Simulcrypt architecture splits the CA functionality in two major parts:

- **CAS server part** handles the CAS specific management and control flow to distribute access rights to entitled receivers. These parts are private to each CAS vendor and comprise heavy encryption of keys and control words to be distributed in public messages but decoded by entitled receivers only. CAS servers communicate with head-ends via the Simulcrypt protocol over TCP/IP connections. The message format is standardized, but much of the message content is private to the CA system
- **Head-end part** perform the actual scrambling of service content and inserts the CA message flows into transport streams in a standardized way.

3.3 Simulcrypt in the TDX

From a high level user perspective, the Simulcrypt feature comes with Digital Backend modules (QAM, COFDM and/or IP OUT) and is made available via the licensing system. It is managed via the Service tool and connects to CAS servers over TCP/IP through the management port.

To enable Simulcrypt scrambling, the user must:

- Install one or more output modules with Simulcrypt option
- Install proper license for Simulcrypt in the TDX
- Configure CAS ID and address information per TDX system
- Connect and configure a CAS server

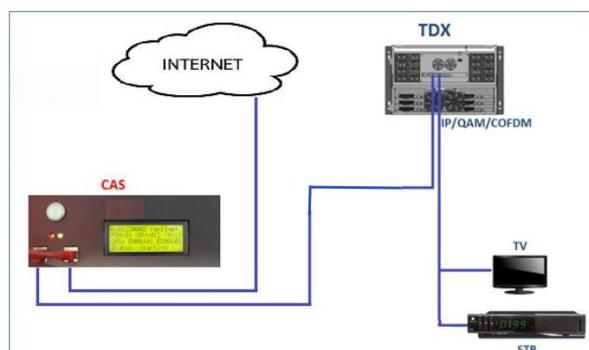

To enable a Simulcrypt scrambled service, the user must:

- Select a scrambler, ie. a Simulcrypt enabled backend module
- Configure CAS parameters for scrambling the service
- Map the scrambled service to outputs via the TDX pool

The CAS server and scrambler related configuration is inspired by the existing configuration of CI scrambler modules.

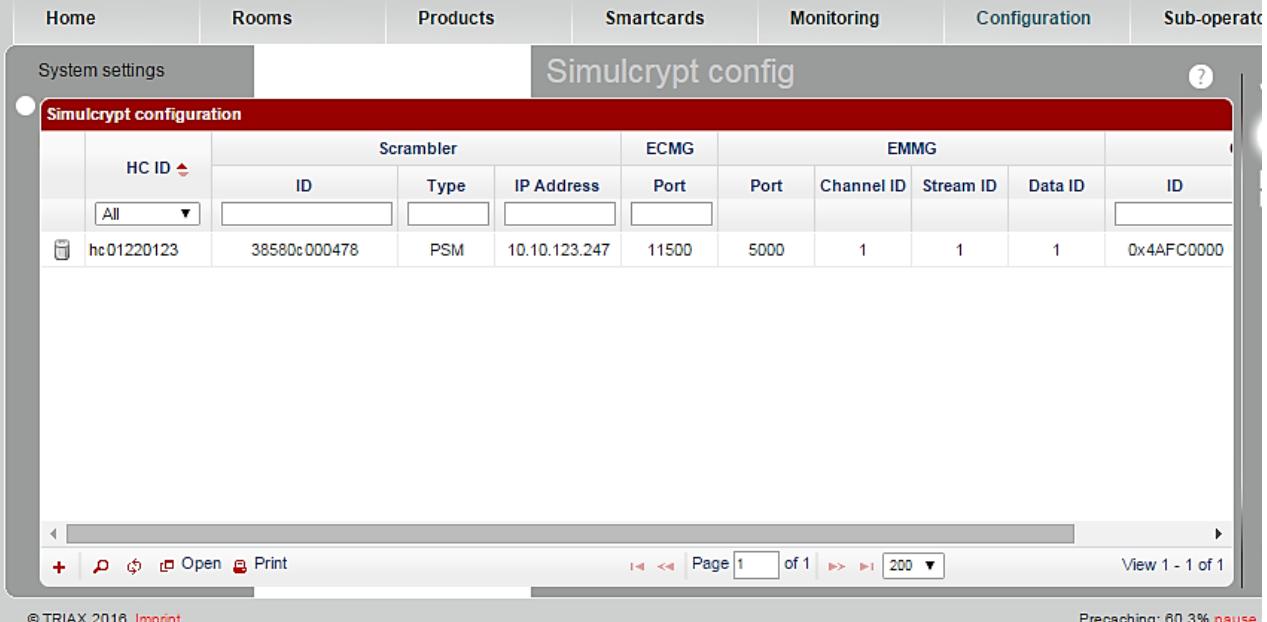

3.4 System setup description

- TDX & CAS need to be connected in SAME LAN
 - TV & STB Connected as example above
 - STB: able to Descramble service
- Now TDX and CAS system both in same LAN

3.5 Simulcrypt Configuration in Panaccess

Configure as example below

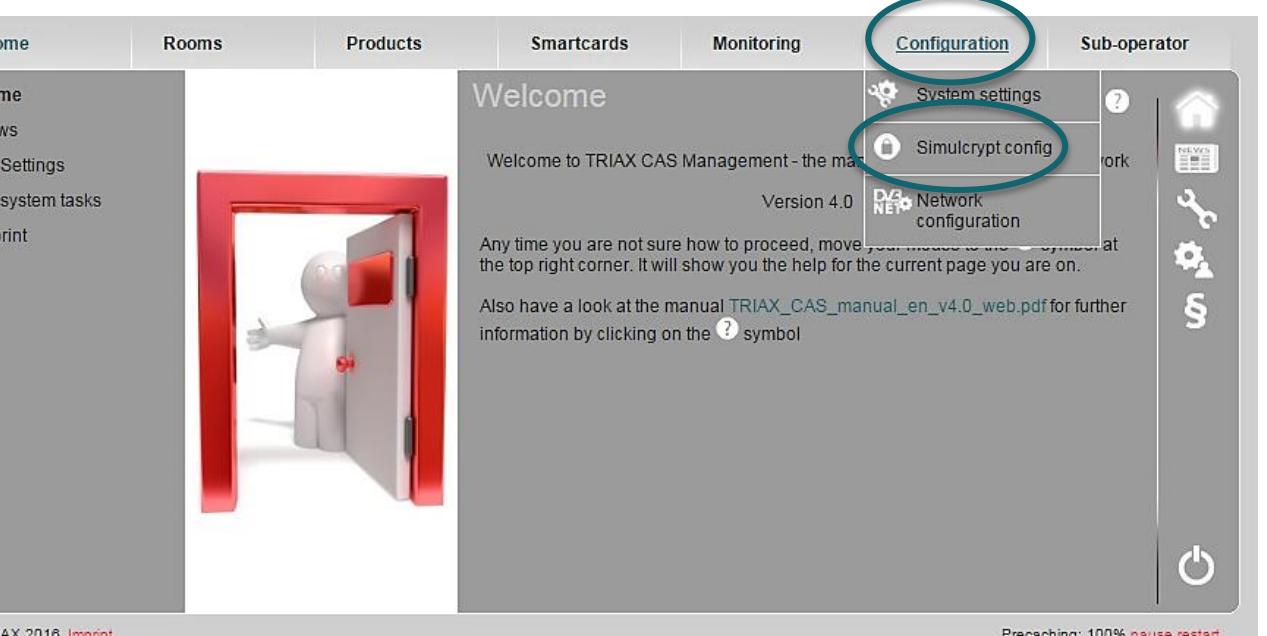

HC ID	Scrambler			EMMG					
	ID	Type	IP Address	Port	Port	Channel ID	Stream ID	Data ID	ID
All	38580c000478	PSM	10.10.123.247	11500	5000	1	1	1	0x4AFC0000

3.6

-

3.7

3.8 Login to Panaccess – access Simulcrypt

3.9 Add scrambler information

The screenshot shows the 'Simulcrypt config' interface with the 'Simulcrypt configuration' tab selected. The main area displays a table with columns: HC ID, Scrambler, ECMG, and EMMG. One row is visible, showing details for a PSM type scrambler. The toolbar at the bottom left includes a '+' button, which is circled in red.

HC ID	Scrambler		ECMG		EMMG				ID
	ID	Type	IP Address	Port	Port	Channel ID	Stream ID	Data ID	
All	38580c000478	PSM	10.10.123.247	11500	5000	1	1	1	0x4AFC0000

Press +

Enter scrambler information – click submit.

Now scrambler information is added in the Panaccess System.

The screenshot shows the 'Simulcrypt config' interface with an 'Add Record' dialog box open. The dialog has tabs for 'Scrambler', 'ECMG', and 'EMMG'. The 'Scrambler' tab is active, showing fields for ID, Type, and IP Address, all of which are circled in red. The 'ECMG' tab shows a port setting of 12500. The 'EMMG' tab shows a port setting of 5000. At the bottom of the dialog are 'Submit' and 'Cancel' buttons, with 'Submit' being circled in red.

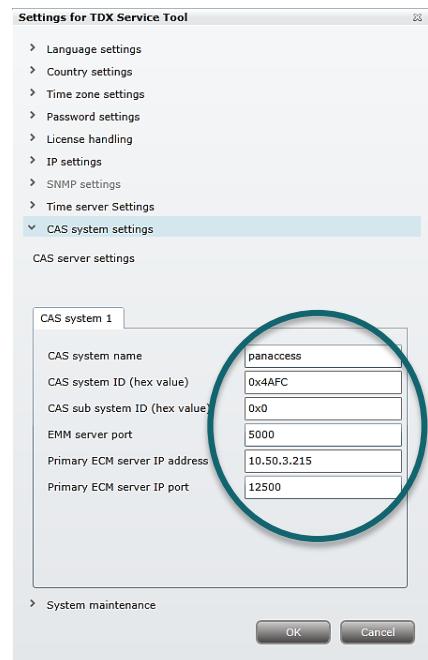

4 How to set up Simulcrypt in the TDX

4.1 Prerequisites

- TDX should be connected to the CAS System
- TDX should have quality input signal to use
- User should have license(s)

How to set up Simulcrypt in the TDX:

- Enter relevant information in "CAS system settings" from TDX Admin options window.
- Enter mandatory fields as shown in the example in the Service Tool.
- Click OK and apply

4.2 How to setup a service to be scrambled

- Route non scrambled service to scrambler
- Configure "input" in TDX as example below
- Click Update and Apply

Services	Types	SID	Selected services
DR1	HDTV	101	<input type="checkbox"/>
DR1Syn	HDTV	111	<input type="checkbox"/>
DR2	TV	102	<input type="checkbox"/>
DR2Syn	TV	112	<input type="checkbox"/>
OAD MUX1	DATA	81	<input type="checkbox"/>
Syd	TV	414	<input checked="" type="checkbox"/>
TV SYD	HDTV	1214	<input type="checkbox"/>

Click on CA then on Simulcrypt scramblers.
Click on Setup

Slot	Running mode	Services	Status	Actions
Main unit (4 items)				
2	Limited CAS (12 service)	DR1, DR2	OK	<button>Setup ...</button> <button>Delete</button> <button>Log</button>

Module list
Setup buttons

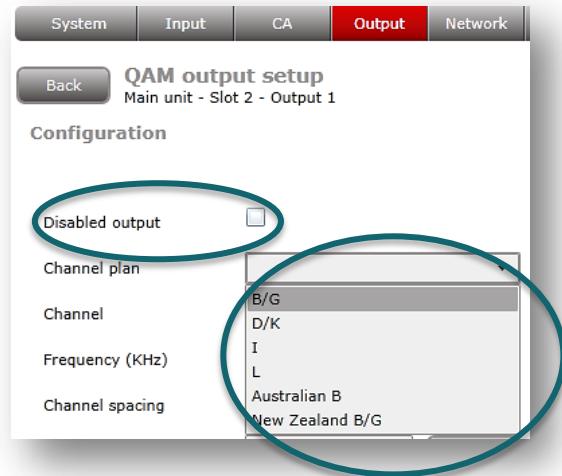

Output modules has to be configured individually. Select a QAM output module and click Setup button to display the configuration window of the module

5.2 Configuration of output modules

The first time the Service Tool displays the Configuration window for an output module in a new configuration the fields in the window will display default values and/or be empty, and the output module is disabled.

Disabled output	If you want to enable this module, click the Disabled output checkbox.
Channel plan	To select another TV system, open the drop-down list with the systems you can choose from. Select the system you want to use.
You can configure a QAM module either:	<ul style="list-style-type: none"> • by using the specifications of the channel plan • or by entering a frequency manually.

Tabs	System	Input	CA	Output	Network	Channel list	Services	Apply	Log out	Admin.	Buttons

Configuration of output modules - continued

Channel, Frequency and Channel spacing

- **Using the channel plan definitions:**

Open the drop-down list with the predefined channels and select the channel you want to use. When you have selected a channel the Frequency and Channel spacing fields are automatically filled in.

<p>Channel</p> <p>Frequency</p> <p>Channel spacing</p> <p>Select input</p>	<p>Enter a frequency manually: Open the Channel drop-down list and select "Frequency" list.</p> <p>Enter the desired frequency in KHz in the Frequency field.</p> <p>Open the drop-down list with the channel spacings and select the channel spacing you want to use.</p> <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;"> <p>NOTE: When you have selected a channel using the channel plan or entered a frequency manually, then you have also set up the other three RF channels on the module in question. You only need to select services for each of the three other RF channels, or disable one or more of the three channels.</p> </div> <p>You can select services in two ways, either:</p> <ul style="list-style-type: none"> • by selecting services from the TDX-pool or • by selecting services from an input module you select. 	<p>Disabled output <input type="checkbox"/></p> <p>Channel plan <input type="button" value="B/G"/></p> <p>Channel <input type="button" value="S25 (338000) Main unit, Slot : ▾"/></p> <p>Frequency (KHz) <input type="text" value="338000"/></p> <p>Channel spacing <input type="button" value="8 MHz"/></p> <p>Select input <input type="button" value="Services ▾"/> <input type="button" value="Services..."/></p> <p>RF level correction <input type="button" value="+0 dB"/></p>
--	---	--

5.3 Services from the TDX pool

Open the drop-down list and select "Services" from the drop-down list. Click the Services... button next to Select input field to open the Select services window

Disabled output	<input type="checkbox"/>
Channel plan	B/G
Channel	S25 (338000) Main unit, Slot :
Frequency (KHz)	338000
Channel spacing	8 MHz
Select input	Services <input type="button" value="Services..."/>
RF level correction	+0 dB

In the Select Services window you can select the service or services that you want to output.

NOTE:

By clicking one of the underlined column headlines you can sort the list into alphabetical or numerical order.

Select services

Select service(s) from list

Services	Types	SID	Service sources	Select service(s)	Output SID
DR1_scrambled	HDTV	\$ 101	(Main Unit, scrambled)	<input type="checkbox"/>	7
DR2_scrambled	TV	\$ 102	(Main Unit, scrambled)	<input type="checkbox"/>	8
TV 2 Danmark HD	HDTV	\$ 15000	(Main Unit, input 15)	<input type="checkbox"/>	1
VH-1	TV	\$ 5055	(Main Unit, input 1)	<input type="checkbox"/>	2

Mux name Cancel OK

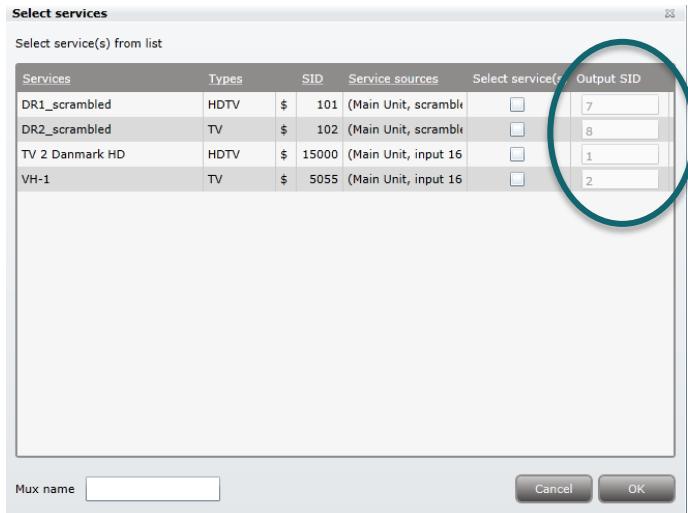

Click the checkbox to the right of the service(s) you want.

By default each service listed in the Select services window has an automatically assigned Service ID (SID) which is displayed in the Output SID column.

The SID must be a number between 1 and 65535.

The SID must to be unique inside a network with the same Original Network ID (ONID) and Transport Stream ID (TS-ID). All QAM output modules in your TDX headend system uses the same ONID but separate TS-IDs for each output.

You can manually change the SID of the services you have selected in the Output SID column.

If you assign the same SID to services distributed via the same output, the TDX system will check the SIDs and display a warning that explains the problem.

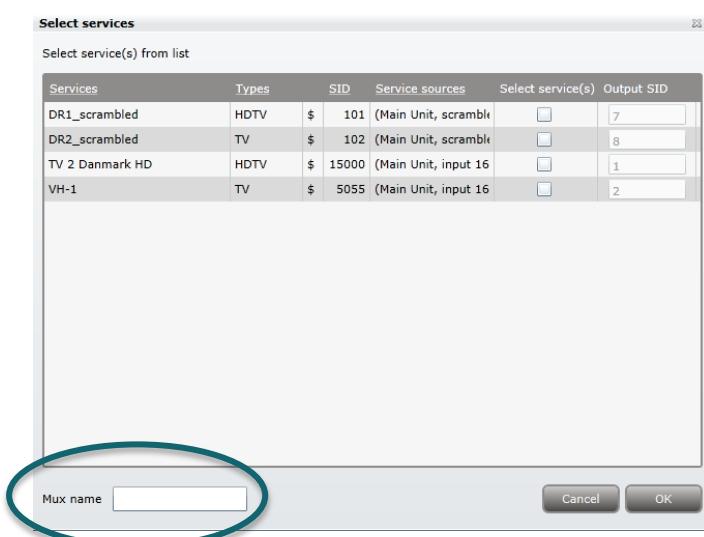

If you want to give your selection of services a name, enter the name in the Mux name field.

NOTE:

The services you have selected will no longer be available in the TDX-pool for other output modules.

Click OK to return to the Configuration window.

5.4 Services from input module

To select the services from a particular input module, open the drop-down list of the Select input field and select "Transparent" from the list. Click the Services... button to open the Select input modules window.

Disabled output

Channel plan B/G

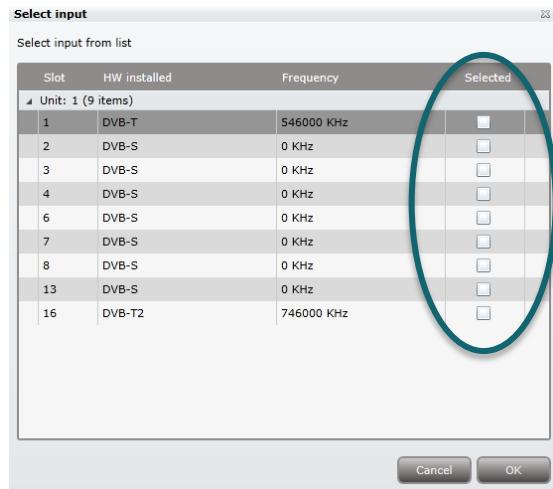

Channel S22 (314000)

Frequency (KHz) 314000

Channel spacing 8 MHz

Select input

RF level correction +0 dB

Click the checkbox of the module you want to use. If you want to give your selection of services a name, enter the name in the Mux name field. Click OK to return to the Configuration window. Next you select or enter values in the other fields in the Configuration window.

5.5 Additional configuration

RF level correction

To select another RF level correction, open the dropdown list and select the level you want to use.

Symbol rate

Enter the desired symbol rate (from 3150 to 7200 kS) in the Symbol rate field.

QAM mode

To select which QAM mode to use, open the dropdown list and select the QAM mode you want to use.

Transportstream ID

By default each QAM output has an automatically assigned transport stream ID. It is possible to change the ID.

NOTE:
Each QAM output in your TDX headend system must have a unique transport stream ID.

Manual SDT version

By default this checkbox is deselected. If it is necessary to control when a new SDT version is sent, then select the checkbox and enter a version number (0-31) in the field next to the checkbox. It is recommended that you keep the default value.

Disabled output

Channel plan B/G

Channel S25 (338000) Main unit, Slot :

Frequency (KHz) 338000

Channel spacing 8 MHz

Select input

RF level correction +0 dB

Symbol rate

QAM Mode

Transportstream ID

Manual SDT version

6875

64-QAM

20

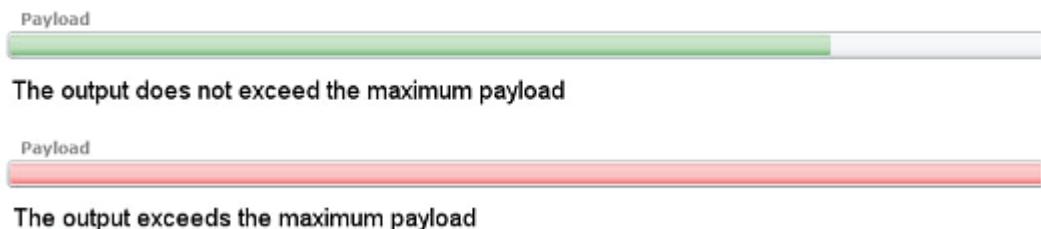

-1

5.6 Payload monitor

The payload monitor above the status information area is a real time monitor, which graphically indicates the amount of data that is currently being transmitted.

Changes in the configuration have to be submitted before the payload monitor can measure it.

The update frequency is approximately 5 seconds.

5.7 Status information

Status information about the output is placed at the bottom of the Configuration window.

Status information			
Status	SW-Revision	Current payload	Max payload
OK	3.1.1.33000	6.6 Mb/s	50.7 Mb/s

Status	Informs you whether output is enabled or disabled.	Current payload	Informs you about the level of data that is currently being transmitted.
SW revision	Informs you whether output is enabled or disabled.	Max. Payload	Displays the maximum limit on how much data you can transmit.
NOTE: The software version of the QAM module must be identical with the software versions installed on the other input/output modules as well as the headend units.		When you have finished the configuration of the output, click the Submit button to enter the information into the headend system and return to the Output window. Remember to click the Apply button in the upper right-hand corner to save new settings in the configuration.	

5.8 Check configuration

When you return to the Output window the configuration of the output module is displayed in the module list. When writing is black – the module has been configured; when red then it is not configured (or the configuration is deleted)

Now you can configure the other outputs of the first QAM module and then continue to configure the other output modules, following the procedure just described.

Slot	Output	HW installed	Channel	Status	
2	4	QAM	S28	Disabled	Setup Delete Log
3	1	IPOUT-MODULE	Prio. 1	OK	Setup Delete Log
3	2	IPOUT-MODULE	Prio. 2	OK	Setup Delete Log
3	3	IPOUT-MODULE	Prio. 3	OK	Setup Delete Log
3	4	IPOUT-MODULE	Prio. 4	OK	Setup Delete Log
4	1	QAM	S21	OK	Setup Delete Log
4	2	QAM	S22	Disabled	Setup Delete Log
4	3	QAM	S23	Disabled	Setup Delete Log
4	4	QAM	S24	Disabled	Setup Delete Log
6	1	IPOUT-MODULE output configured as NONE	Prio. 1	Not configured	Setup Delete Log
6	2	IPOUT-MODULE output configured as NONE	Prio. 2	Not configured	Setup Delete Log
6	3	IPOUT-MODULE output configured as NONE	Prio. 3	Not configured	Setup Delete Log
6	4	IPOUT-MODULE output configured as NONE	Prio. 4	Not configured	Setup Delete Log

5.9 Delete output modules

To remove an output module and the associated configuration you can use the Delete button of the module in question in the Output window. Click the Delete button of the QAM output module you want to remove. A message window is displayed asking you to confirm that you want to remove the output module. The deleted (or not configured) modules are in red writing...

Slot	Output	HW installed	Channel	Status	
2	4	QAM	S28	Disabled	Setup Delete Log
3	1	IPOUT-MODULE	Prio. 1	OK	Setup Delete Log
3	2	IPOUT-MODULE	Prio. 2	OK	Setup Delete Log
3	3	IPOUT-MODULE	Prio. 3	OK	Setup Delete Log
3	4	IPOUT-MODULE	Prio. 4	OK	Setup Delete Log
4	1	QAM	S21	OK	Setup Delete Log
4	2	QAM	S22	Disabled	Setup Delete Log
4	3	QAM	S23	Disabled	Setup Delete Log
4	4	QAM	S24	Disabled	Setup Delete Log
6	1	IPOUT-MODULE output configured as NONE	Prio. 1	Not configured	Setup Delete Log
6	2	IPOUT-MODULE output configured as NONE	Prio. 2	Not configured	Setup Delete Log
6	3	IPOUT-MODULE output configured as NONE	Prio. 3	Not configured	Setup Delete Log
6	4	IPOUT-MODULE output configured as NONE	Prio. 4	Not configured	Setup Delete Log

Until you have physically removed the output module from the headend unit, the module list will display four lines with the writing in red.

5.10 Event log

If you want to display a history of the events related to the QAM output, click the Log button of the output in question to open the Event Log window.

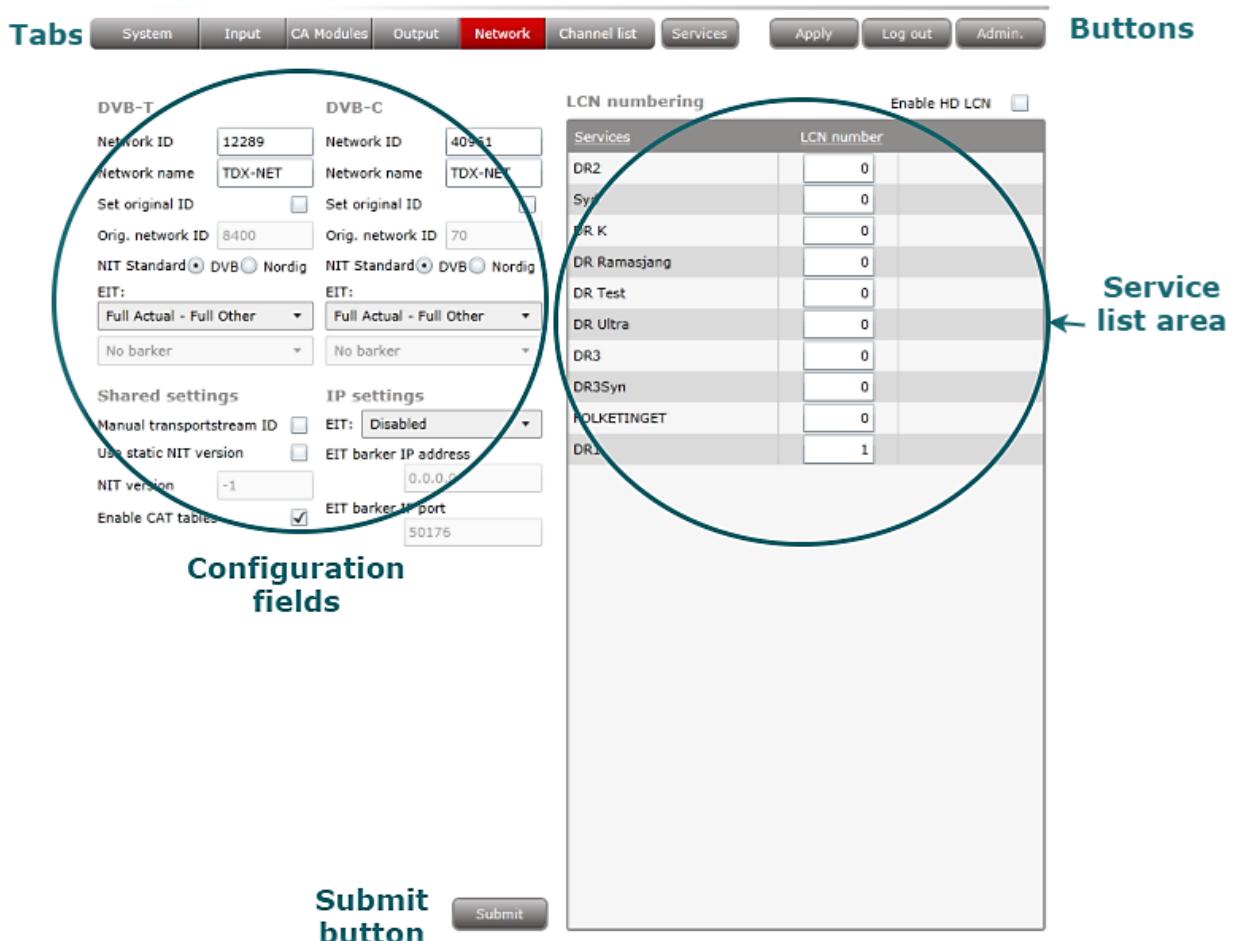

History of last 100 events
Fri Mar 11 07:50:40 2016: Mux load ok
Fri Mar 11 07:50:36 2016: Mux overloaded
Fri Mar 11 07:49:47 2016: Mux load ok
Fri Mar 11 07:49:43 2016: Mux overloaded

Until you have physically removed the output module from the headend unit, the module list will display four lines with the writing in red.

6 Network window

6.1 Definitions

Click the Network tab in the Service Tool to display the Network window. The first time you display the Network window the fields in the window will display default values and/or be empty. The service list area will display all the digital services you have configured to output using the Output tab.

End-users need the network ID if they have to do a NIT (Network Information Table) search when searching for services on their televisions or set-top boxes. Some set-top boxes may also need the original network ID in connection with a NIT search.

Network IDs and names are required for both both DVB-T and DVB-C.

6.2 Configuration

Network ID	Enter the required network ID in the Network ID field. If it is an open network, the network ID has to follow the "ETSI TR 101 211" guidelines. If it a closed network you can determine the ID yourself.
Network name	Enter a network name in the Network name field. The maximum number of characters you can enter in the field is 255.
Set original ID	To change the default values of the original network ID, click Set original ID checkbox to enable the Orig. network ID field.
Original network ID	Enter the required original network ID in the Orig. network ID field.
NIT standard	Select which standard you want to use, DVB or Nordig. By default DVB is selected.
EIT information	The Event Information Table (EIT) drop-down list enables you to change the EIT settings for both DVB-T and DVB-C.

Detailed description: This screenshot shows the configuration interface for DVB-T and DVB-C. It includes fields for Network ID, Network name, Set original ID (checkbox), Orig. network ID, NIT Standard (radio buttons for DVB and Nordig), and EIT dropdown menus. The EIT dropdowns are circled in green. Below them are 'Shared settings' and 'IP settings' sections.

DVB-T	DVB-C
Network ID: 12289	Network ID: 40961
Network name: TDX-NET	Network name: TDX-NET
<input type="checkbox"/> Set original ID	<input type="checkbox"/> Set original ID
Orig. network ID: 43962	Orig. network ID: 70
NIT Standard: <input checked="" type="radio"/> DVB <input type="radio"/> Nordig	NIT Standard: <input checked="" type="radio"/> DVB <input type="radio"/> Nordig
EIT:	EIT:
Full Actual - Full Other	Full Actual - Full Other
No barker	No barker

Shared settings

- Manual transportstream ID:
- EIT: Disabled
- Use static NIT version:
- EIT barker IP address: 0.0.0.0
- NIT version: -1
- Enable CAT tables:
- EIT barker IP port: 50176

6.3 EIT information

Basically, the drop-down list gives you at choice between using a barker channel or using all outputs for transmitting EIT information.

By using a barker channel all EIT information, i.e. actual present/following and actual schedule EIT for all services, will be transferred from the individual outputs to the barker channel thereby making more room/ payload available to the transmission of services.

NOTE:

If you use a barker channel to carry the EIT information you have to make sure that the set-top boxes used by end-users are NorDig compliant, i.e. they can read a Linkage Descriptor from a NIT.

To use a barker channel for transmitting all EIT information, select "Barker channel" in the EIT drop-down list. Below the EIT drop-down list, select the channel you want to use as barker channel in the drop-down list.

Detailed description: This screenshot shows the EIT dropdown menu. The 'No barker' option is highlighted in blue, indicating it is selected. Other options include 'Barker channel', 'S25(Main Unit slot 2-1)', 'S21(Main Unit slot 4-1)', and 'S29(Unit 2 slot 1-1)'.

EIT:

- Barker channel
- No barker
- S25(Main Unit slot 2-1)
- S21(Main Unit slot 4-1)
- S29(Unit 2 slot 1-1)

Detailed description: This screenshot shows the configuration interface with EIT dropdowns. The 'Barker channel' option is highlighted in green. Below the dropdowns are 'Shared settings' and 'IP settings' sections.

DVB-T	DVB-C
Network ID: 12289	Network ID: 40961
Network name: TDX-NET	Network name: TDX-NET
<input type="checkbox"/> Set original ID	<input type="checkbox"/> Set original ID
Orig. network ID: 43962	Orig. network ID: 70
NIT Standard: <input checked="" type="radio"/> DVB <input type="radio"/> Nordig	NIT Standard: <input checked="" type="radio"/> DVB <input type="radio"/> Nordig
EIT:	EIT:
Full Actual - Full Other	Full Actual - Full Other
No barker	Barker channel

Shared settings

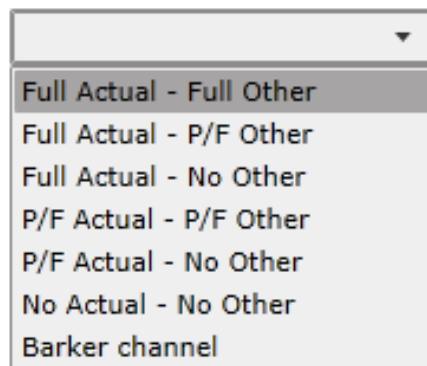

- Manual transportstream ID:
- EIT: Disabled
- Use static NIT version:
- EIT barker IP address: 0.0.0.0
- NIT version: -1
- Enable CAT tables:
- EIT barker IP port: 50176

EIT information - continued

If you prefer not to use a barker channel you have the following options:

Full Actual - Full Other	All outputs will have all EIT information available, so all actual present/following, actual schedule, other present/following and other schedule EIT are sent out with all muxes.
Full Actual - P/F Other	All outputs will have actual present/following and actual schedule EIT information, but only other present/following EIT information.
Full Actual - No Other	All outputs will have actual present/following and actual schedule EIT information, and no other EIT information.
P/F Actual - P/F Other	All outputs will have actual present/following EIT information and other present/following EIT information only.
P/F Actual - No Other	All outputs will have actual present/following EIT information.
No Actual - No Other	No EIT information is output.

EIT:

Shared settings:

Manual transport stream ID	Select the Manual transportstream ID if you want to enable the Transportstream ID field in the Configuration windows for output modules..
Use static NIT version	By default the Use static NIT version checkbox is deselected.
NIT version	Enter the desired number in the LCN number field to the right of each service in the service list area.
Enable CAT tables	Enter the desired number in the LCN number field to the right of each service in the service list area.

Shared settings

Manual transportstream ID	<input type="checkbox"/>
Use static NIT version	<input type="checkbox"/>
NIT version	-1
Enable CAT tables	<input checked="" type="checkbox"/>

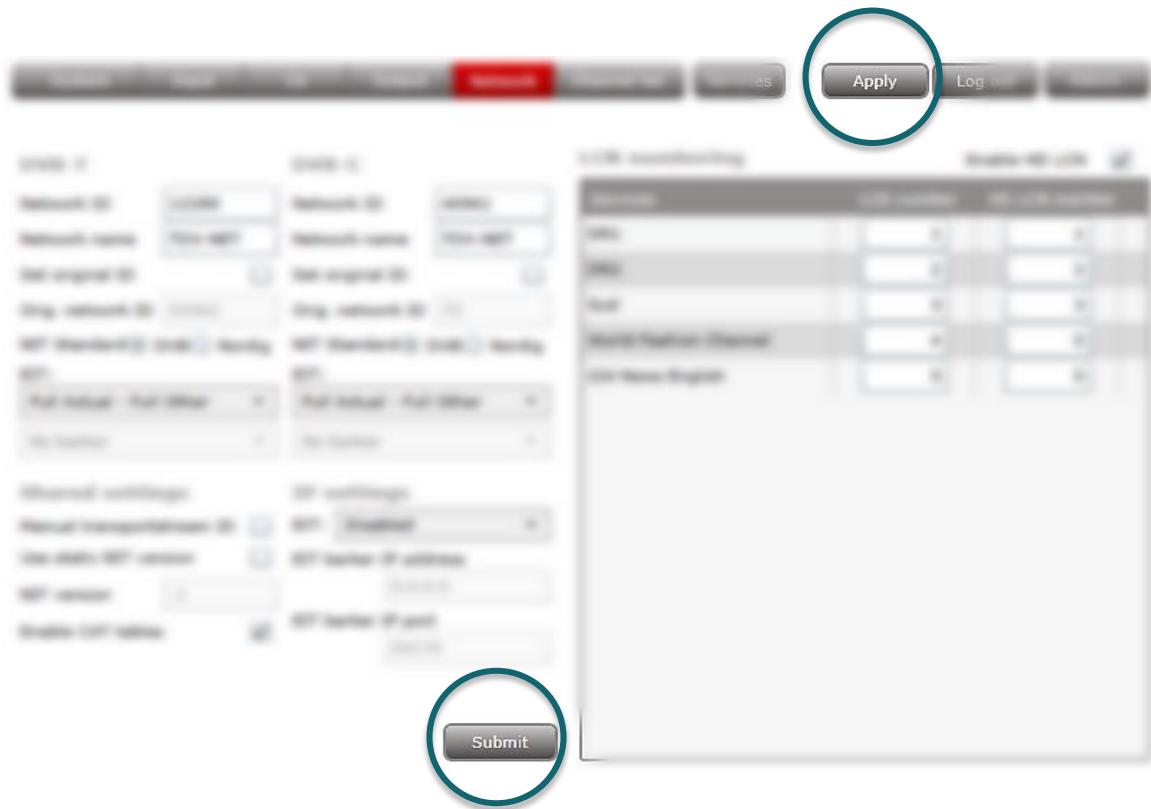

In the service list area you determine the numerical output order of the digital services on the television or set-top box of the end-user.

Enable HD LCN	Select the Enable HD LCN checkbox if you want an HD channel to take precedence over the same channel in SD mode.
LCN number and HD LCN Number	Enter LCN numbers for both the SD and HD channels in the fields in the service list area. NOTE: You cannot give the same LCN number to more services.

LCN numbering		Enable HD LCN <input checked="" type="checkbox"/>	
Services	LCN number	HD LCN number	
DR1	1	1	
DR2	2	2	
Syd	3	3	
World Fashion Channel	4	0	
I24 News English	5	0	

6.4 Submit & Apply

When you have entered the values you require you have to click the Submit button to enter this information into the headend system. Remember to click the Apply button in the upper right-hand corner to save the new settings.

7 Channel list

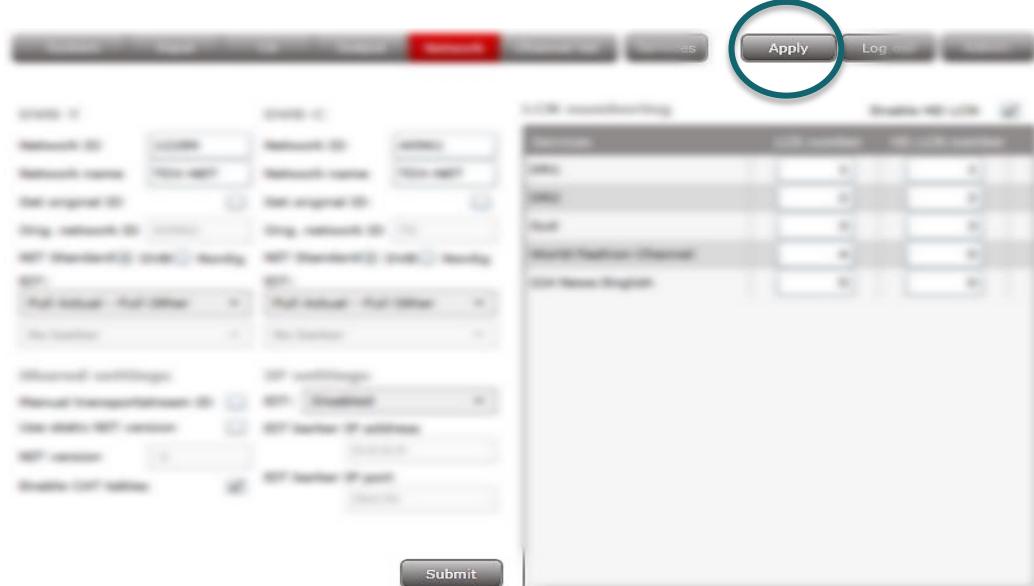

When you have finished configuring all the output modules you have inserted in the headend units the Channel list tab displays a list with all the channels and services that you have selected.

Channel	Mux name	TSID	Services	Output
239.1.1.10	IP output		DR1	(Main Unit, Slot 3-1)
239.1.1.11	IP output		DR2	(Main Unit, Slot 3-1)
239.1.1.12	IP output		DR3	(Main Unit, Slot 3-1)
239.1.1.13	IP output		DR K	(Main Unit, Slot 3-1)
S21		40	DR2, Syd	(Main Unit, Slot 4-1)
S22		41	DR1	(Main Unit, Slot 4-2)
S23		42	DR K, DR Ramasjang, DR Test	(Main Unit, Slot 4-3)
S24		43	DR Ultra, DR3, DR3Syn, FOLKETINGET	(Main Unit, Slot 4-4)

8 Save configuration

An important button when you change your configuration of the headend system is the Apply button placed in the upper right-hand corner of the TDX Service Tool window.

Whenever you have made changes in your configuration, "Apply" on the Apply button turns red to tell you that you have unsaved changes that need to be saved. Click the Apply button to save the changes. When changes have been saved the "Apply" text turns white again.

WARNING
All unsaved changes will be lost in case of a power cut !

9 Your notes

Declaration of Conformity

The manufacturer declares that this product Triax TR 43 complies with the following directives and standards:

Low voltage directive 2006/95/EC
EN 60 065
European EMC directive EMC 2004/108/EC
EN 55 013
EN 55 020
EN 61000-3-2
EN 61000-3-3
